

OpenMRS QA Automation

Java · Selenium WebDriver · TestNG · Maven · REST-assured · Allure

POM STRUCTURE - PAGE OBJECT MODEL

What Was Tested

Patient Management

Create, update, retrieve — mandatory fields, duplicates prevented

Patient Identifiers

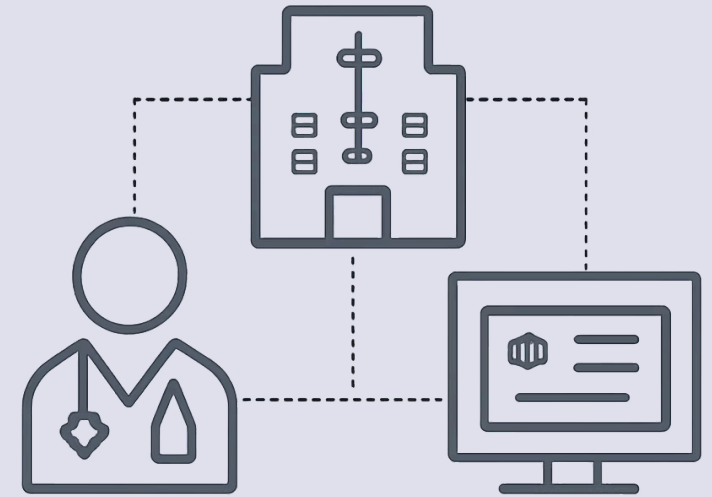

Auto-generated unique IDs per business rules

Visit Management

Clinical events tracked, reporting accuracy verified

Authentication & Session

Secure login, authorized access, privacy compliance

Project Structure

A well-organized Maven project layout separating base classes, page objects, utilities, and test suites.

Framework & Approaches

Page Object Model

Encapsulated locators & actions

TestNG

Groups, parallel execution, annotations

Data-Driven Testing

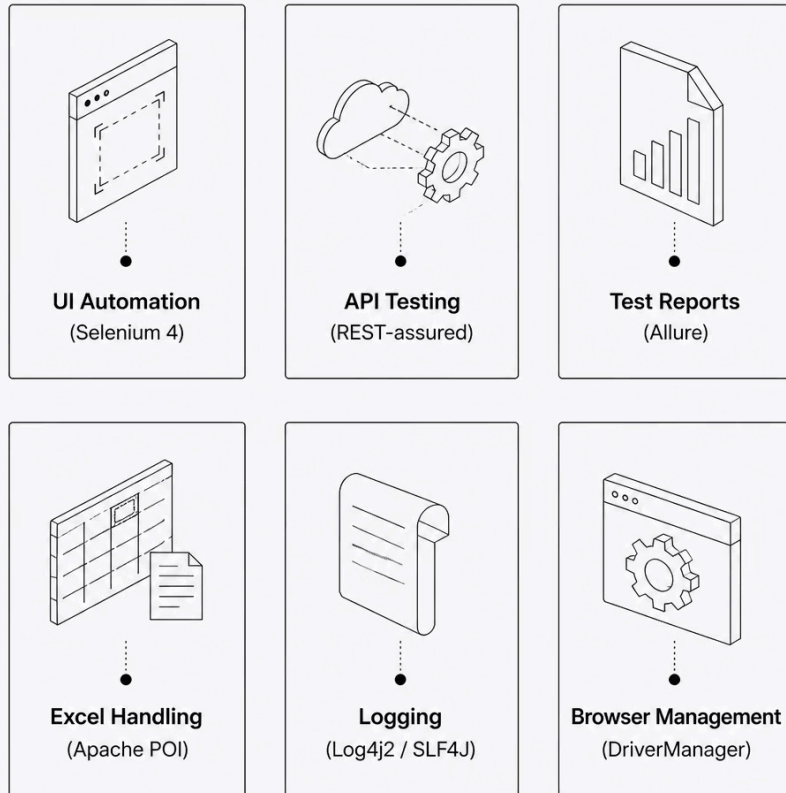

Excel & JSON external data

Listeners & Screenshots

Auto-capture on failures

Technology Stack

Core Tools

- **Selenium WebDriver 4** - UI automation
- **Java** - OOP language
- **REST-assured** - API testing
- **Allure** - Reports & dashboards
- **Apache POI** - Excel handling
- **Log4j2 / SLF4J** - Logging

Test Execution & Reports

Maven

`mvn test -Denv=docker`

TestNG

Groups, parallel runs, `testng.xml`

Allure

Dashboards, trends, screenshots

Environments

Docker

Controlled, repeatable tests

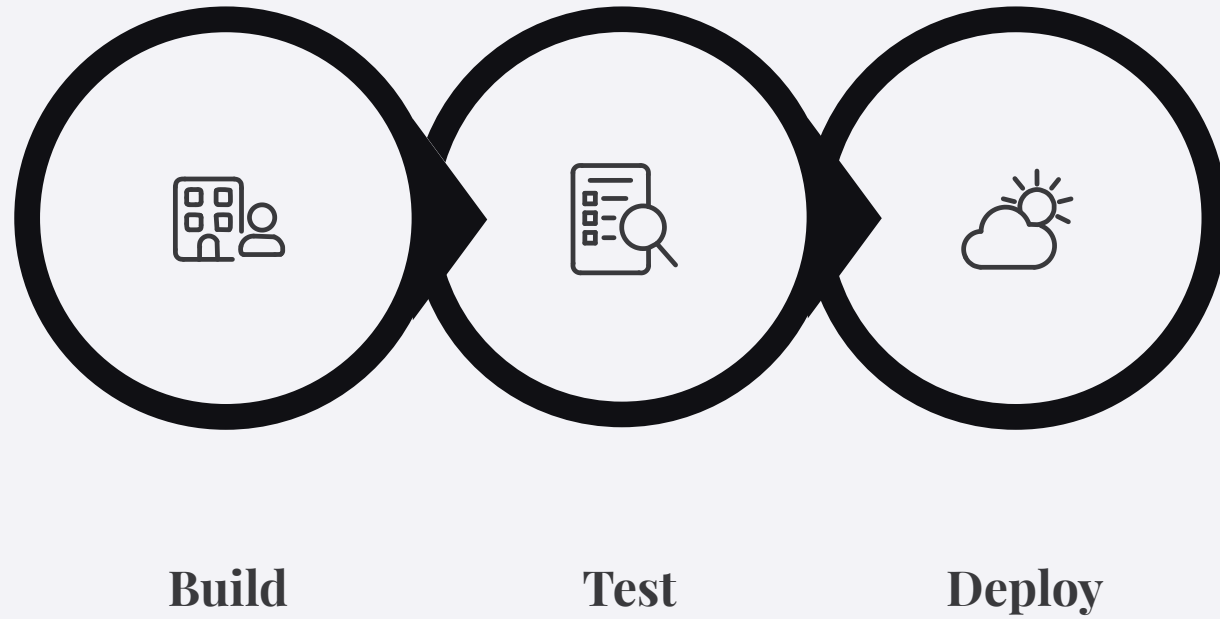

- `docker compose up`
- `mvn test -Denv=docker`

Public Demo

Public instance compatibility

- `mvn test -Denv=demo`

CI/CD Pipeline

Azure DevOps pipeline with Build and Deploy stages, triggered on `main` branch.

Quick Start

01

Clone

```
git clone  
https://github.com/IrinaEkb/selenium-  
testng-pom.git
```

02

Start Docker

```
docker compose up →  
http://localhost:8082/openmrs/
```

03

Run Tests

```
mvn clean test -Denv=docker
```
