

Customer Shopping Data Analysis

A strategic review of retail performance across 10 shopping malls — covering revenue trends, category dynamics, customer churn risk, and seasonal insights from 99,457 transactions totaling **\$62.7M** in 2021–2022.

Revenue Flat Despite 99K+ Transactions

\$62.7M

Total Revenue

Combined 2021–2022

99,457

Transactions

Across all malls

+0.18%

YoY Revenue Growth

Only +\$56,521 in 2022

10

Shopping Malls

Across the portfolio

Despite nearly 99,500 transactions, revenue grew by just **0.18%** year-over-year. The core challenge is not transaction volume — it is **average spend per customer and category mix**.

2021 VS 2022: Nearly Identical Results

Key Transaction Metrics

- **Transactions:** 45,678 → 45,973 (+295, +0.65%)
- **Average Basket:** \$686.10 → \$682.30 (-\$3.80)
- **Revenue per Transaction:** \$686.00 → \$682.80 (-\$3.20)

More transactions did not translate to meaningful revenue growth. Customers spent slightly less per visit in 2022 — the real opportunity lies in **increasing average spend**, not just driving foot traffic.

Clothing Dragged Down the Entire Year

What Drove the Numbers

- **Clothing -\$294,678:** The single largest drag on annual revenue
- **Technology +\$163,800** and **Shoes +\$136,238:** Strongest growth engines
- Combined, Tech and Shoes recovered **~53%** of Clothing's losses
- Remaining categories contributed only marginal gains

Two Malls Generate Over 20% of All Revenue

Shopping Mall

Portfolio Concentration Risk

- **Mall of Istanbul** (\$6.36M) and **Kanyon** (\$6.24M) dominate — each outperforms the bottom 5 malls combined
- A sharp drop-off exists after the top 3: revenue falls from **\$4.7M to \$3.1M**
- Bottom-tier malls (Emaar, Forum, Cevahir) each contribute only **~\$1.5M**
- Overall revenue is **highly dependent on a small number of locations**

Peak Months Weakened in 2022

■ 2021 (\$)

■ 2022 (\$)

July 2022 vs 2021

- Revenue declined by **-\$52,913**
- Clothing fell **-6.1%**; Technology **-3.6%**
- Istinye Park and Emaar Square lost **-24.5%** and **-28.0%**

October 2022 vs 2021

- Revenue declined by **-\$26,578**
- Shoes collapsed **-12.1%**, erasing Clothing's +3.8% gain
- Emaar Square and Zorlu Center dropped **-20.4%** and **-24.8%**

57% of Customers Are Already Lost

Recency Segment

Revenue at Risk by Segment (2022)

- **High Risk:** \$15.97M — 23,153 customers
- **At Risk + Critical:** \$15.33M combined
- **Active (0-90 days):** Only \$75.7K — 113 customers

Over **56,000 customers** haven't purchased in over a year. Basket size is identical across all segments (~3 items, ~\$689), confirming that **time — not behavior — drives churn**.

High-Value vs Budget Shoppers: Distribution Across Malls

Key Insights

- **High-value customers** concentrate in premium malls (Mall of Istanbul, Kanyon) — **58% of all \$800+ spenders**
- **Budget shoppers** are more evenly distributed, with slight preference for secondary malls
- **Metrocity** bridges both segments effectively — strong in both high-value and mid-range
- **Lower-tier malls** (Emaar, Forum, Cevahir) attract primarily budget-conscious shoppers
- **Revenue opportunity:** Premium malls have capacity to increase high-value customer volume; secondary malls should optimize for mid-range conversion

Two distinct customer segments emerge based on basket size — high-value spenders (\$800+) and budget shoppers (\$500–\$600). Their distribution reveals critical insights about mall positioning and customer demographics.

CATEGORY ANALYSIS

Category Performance by Location: Where Each Category Wins

Different shopping malls show distinct category strengths. Understanding these patterns reveals where to optimize inventory, marketing, and tenant mix.

Strategic insights

- Technology dominates premium malls (Mall of Istanbul, Kanyon, Metrocity) — 35–40% of revenue
- Clothing shows strength in mid-tier malls (Kanyon, Metropol) but weakness in Istinye Park
- Shoes perform best in Istinye Park (29% of mall revenue) — opportunity for expansion
- Cosmetics and Toys are underdeveloped across all locations — potential growth categories

Recommendation: Reallocate Clothing inventory from underperforming locations (Istinye Park, Zorlu) to Kanyon and Metropol; expand Technology in premium malls; test Cosmetics growth in Metrocity

STRATEGIC RECOMMENDATIONS

Three Priorities to Unlock Growth

Recover Peak Months: +\$80K-\$140K

Deploy Clothing markdowns in July at Istinye Park and Emaar Square. Pre-stock footwear before October. Capture value-seeking shoppers before they shift to outlets.

Re-Engage Customers Within 90 Days

Launch automated SMS and email campaigns targeting At Risk customers. Focus on 30-50 Female (core demographic) and Under 30 Male (lowest spend per customer).

Fix or Reallocate Underperforming Malls

Emaar Square dropped -28% in July and -20% in October — a structural problem. Shift marketing budget to Mall of Istanbul, Kanyon, and Viaport Outlet.
